RE: Water service to Port owned Land

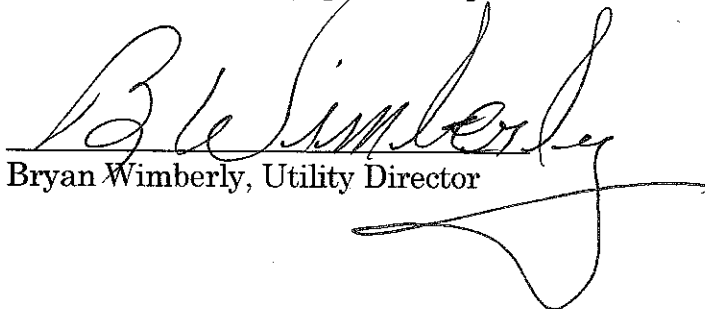

Dear Robert:

Per your email on 6/04/10, please accept this as a response to your questions.

1. Natchitoches is interested in providing water service to the Port Facility and is capable of providing an additional 300,000 gallons per day above the existing usage.
2. The water treatment plant in Natchitoches has a daily capacity of 8 million gallons per day. Currently we are underway with a \$5 million expansion that is expected to increase our daily output capacity by 4 million gallons per day. This new expansion is expected to be in place by the end of 2011.
3. The feed line from the Grand-Ecore tank to the port is a 12" pvc line which extends onto the port property. This produces a static pressure of approximately 55 #.

The Water System in the area of the port is fed primarily from a 1 million gallon tank in East Natchitoches with in turns feeds a 300,000 gallon tank located on La Hwy. 6 East at Grand-Ecore.

Should you have any questions, please feel free to contact me.

Bryan Wimberly, Utility Director
