## Water Supply Extension Plan

City of Natchitoches  
Highway 478 Development Tract

The City of Natchitoches will supply water service to the site from the existing service point located on the east side of I-49 in the north servitude of Highway 478

Service provided will be a continuation of the current 12" supply main and will be delivered to the site boundary at the I-49 crossing.

The expected cost to extend service is \$800,000 - \$1,000,000. Estimate is based on a previous project completed by Cothren, Graff, Smoak Engineering which extended the water service to the current location.
