

Exhibit K - Acadiana Regional Airport P1 Waste Water Excess Capacity Letter

From: [David Moore](#)
To: [Zach Hager](#)
Subject: RE: Peak Load on waste water facility
Date: Tuesday, November 04, 2014 4:59:06 PM

Actually, the average daily use from the Airport is only about 440,000 gallons per day at this time. The 600,000 per day quoted in Mr. Devillier's letter was an estimate of flow which was intended to be on the high side of the actual use.

The peak volume of sewage pumped from the airport to the City plant is approximately 2.75 million gallons for one day during a large rainfall event in July of this year.

Let me know if you need any additional information.

RE: Acadiana Regional Airport – Prime Property “P1” – Wastewater Treatment Service Provider

To whom it concerns:

As per your request, we were asked to provide information of Wastewater Treatment Services and ability to service the Prime Property between Avex and Air Logistics at the Acadiana Regional Airport. It is our understanding that this information is going to be used in certifying this property for the Acadiana Regional Airport in an effort to solicit potential clients to lease the property.

There is a Wastewater Pump Station across the street, (Industrial Drive) from the P1 Prime Property, (approximately 60 feet). This Pump Station is currently connected via Force Main to the Pump Station #1. This Pump Station currently has excess capability of 108,000 GPD.

Sewerage District No. 1 of Iberia Parish (Current Wastewater Treatment Provider) is currently in the process of rehabilitating Lift Stations and Force Mains at the Acadiana Regional Airport. Referenced attached plan illustrating New SS-FM (Sewer Service – Forced Main) from “Pump Station #1” located at the Acadiana Regional Airport and ending at “Tie in to CNI Headworks” located at the City of New Iberia processing facility. Reference attached Bid Tabulation Sheets dated May 2, 2013 for construction cost to complete the improvements. Construction is currently scheduled to start on September 09, 2013.

An Intergovernmental Agreement between Sewage District No. 1, Iberia Parish and City of New Iberia allows for Shared Services and Distribution of Cost for usage of City of New Iberia Wastewater Treatment allowing a total of 2,000,000 GPD capacity. Current volumes of sewage being treated average approximately 600,000 GPD, giving us an excess capacity available of 1,400,000 GPD.

Sincerely,

Joseph Gonzalez

Executive Director, Sewerage District No. 1 of Iberia Parish
